NICE JOB!

SAMPLE

No sign of plaque or calculus:

Home dental care is needed to maintain these healthy teeth and gums. Brushing your pet's teeth is ideal. There are also products available to help make home dental care easier.

reversible stage

STAGE 1 – Mild gingivitis:

The margin of attached gum is inflamed and swollen. Plaque covers the teeth. Home dental care is needed. Dental cleaning is needed **within the next 3 to 6 months** to remove current plaque buildup.

reversible stage

STAGE 2 – Moderate gingivitis:

The entire gum in mouth is painful and swollen. Dental cleaning to **within the next 3 months** is needed afterward.

Economy Style 4"x9" Dental Report Card

You can edit any elements to meet your unique practice requirements.

Custom Design Fee	\$99
Print 250.....	\$149
Print 500.....	\$229

CANINE FELINE

potentially reversible stage

STAGE 3 – Severe gingivitis:
The gums are chemically damaged and they are damaged by plaque and calculus. A sore mouth is evident. Dental cleaning and calculus removal is needed. Home dental care is needed. Surgery may be required to remove damaged teeth.

CANINE

FELINE

irreversible stage

STAGE 4 – Periodontitis:
Chronic infection of the teeth and bone. Bacteria enters through the body and may damage the kidneys. Dental cleaning to **immediately**. Surgery and need extraction afterward is necessary.

FELINE NECK LESION PRESENT:

There is a cavity-like lesion in at least one tooth. This "hole" will get larger and larger until the tooth breaks, causing more and more pain. This disease process cannot be medically stopped. Extraction of the tooth needs to be scheduled to stop your cat's pain.

How Brickell Bay Animal Hospital Cleans Your Pet's Teeth.

BEFORE

AFTER

- 1. Pre-anesthetic Blood Work:** This is a blood test that detects major organ and metabolic abnormalities that may complicate the anesthetic procedure.
- 2. Anesthetic Monitoring:** This includes monitoring of the heart, respiration and blood pressure.
- 3. Intravenous Catheter and/or Fluid Therapy:** Allows access for injectable drugs. Fluid therapy helps to maintain blood pressure during the procedure and avoid post-operatively dehydration.
- 4. Anesthesia:** Inhalant gas anesthesia provides a safe and comfortable dental cleaning.
- 5. Dental Scaling:** The process that removes the calculus and plaque from the tooth surface and below the gum line.
- 6. Dental Polishing:** Necessary for finishing the scaling and cleaning process. Prevents plaque from reattaching to the tooth surface after scaling and delays the reattachment of plaque-causing bacteria.
- 7. Pain Management:** Based on the needs of your pet and the procedure done.
- 8. Extractions:** The health of each tooth is individually assessed, and any tooth that is diseased should be extracted.
- 9. Antibiotics:** If there is significant periodontal disease, antibiotics will be administered.
- 10. Digital Dental X-rays:** We also recommend dental x-rays. Many of your pet's dental problems involve the roots and other tissues which are not visible on a regular oral exam.
